In this lecture, we will discuss…

✧ Interacting with remote repositories

✧ Github

Remote Repos – Set Up and Push

✧ **`$git remote add alias remote_url`**

- Link remote repo with your local repo

✧ **`origin`** - default alias for a cloned repo

✧ **`$git push alias branch_name`**

- Push changes to your branch (master) out

Github

- ✧ Web-based **hosting service** for software projects that use Git

- ✧ Why use Github?

  - Community-oriented

  - Social networking functionality

    - ▪ Feeds, followers, watching projects…

  - Interesting social networking graphs

  - Wiki, Issue tracking
